4 adam design software adam for automated design of asynchronous machines is a very powerful productivity tool that permits the automated design of very complex asynchronous state machines all free of timing defects the input files are state tables for the desired state machines the output files are given in the berkeley format appropriate for directly programming plas adam also allows the designer to design synchronous state machines timing defect free the options include the lumped path delay lpd model or nested cell model for asynchronous fsm designs and the use of d flip flops for synchronous fsm designs the background for the use of adam is covered

in chapters 11 14 and 16 of the revised 2nd edition

5 a ops design software a ops for asynchronous one hot programmable sequencers is another very powerful productivity tool that permits the design of asynchronous and synchronous state machines by using a programmable sequencer kernel this software generates a pla or pal output file in berkeley format or the vhdl code for the automated timing defect free designs of the following

a any 1 hot programmable sequencer up to 10 states

b the 1 hot design of multiple asynchronous or synchronous state machines driven by either plds or ram the input file is that of a state table for the desired state machine this software can be used to design systems with the capability of instantly switching between several radically different controllers on a time shared basis the background for the use of a ops is covered in chapters 13 14 and 16 of the revised 2nd edition
